TESLA
POWERWALL

PROUD PARTNERS

TESLA
POWERWALL
CERTIFIED INSTALLER

We are proud to be one of a select number of Tesla-approved Powerwall installers in Scotland. Powerwall is a rechargeable battery system for domestic properties that stores energy generated by solar or direct from the grid, and makes it available on-demand. We are also approved installers of their EV Charging Points.

REAL TIME MONITORING

The Tesla app offers a seamless experience to monitor your home system in real time from anywhere.

Your app home screen displays real-time power flow, showing how your Powerwall, grid connection and solar system work together to provide your home with energy.

You can use the 'Energy' screen to review historical data of your production and consumption, including the time your solar system begins generating electricity daily and what your overall energy use is by month.

The 'Impact' screen provides you with personalised information to help you identify trends relating to your home's energy use.

Customisation & Control

Select your preferred control mode to suit your use:

Self-powered - become more energy independent only available when paired with solar

Time-based control - Lower your energy bill to maximise benefits if your unit prices vary throughout the day

Vehicle Charging During Power Outages
Use your Powerwall to charge your Tesla vehicle in the event of a grid outage
